

EXINI Diagnostics launches upgraded versions of our products EXINI heart™, EXINI bone™, EXINI dat™ and EXINI brain™

The new versions are a result of a continuing close collaboration between our R&D department and our customers to keep our products up to date with the user's needs in their interpretation of diagnostic images.

Some of the new feature are:

- possibility to install own normal databases,
- upgraded ANN (CADx) which is a unique feature that presents a diagnostic advice to the physician.

With our broad product portfolio we can offer unique high quality analytical tools for nuclear medicine procedures in patients with heart disease (myocardial perfusion) EXINI heart™, brain disease (cerebral blood flow) EXINI brain™, (dopaminergic neuron terminals function) EXINI dat™ and metastatic disease of the skeleton, EXINI bone™
