### **EXINI Diagnostics had a successful EANM.**

What a traffic in our booth! The updated versions of our software, EXINI heart™, EXINI bone™, EXINI dat™ and EXINI brain™ draw a lot of attention among the congress participants, but also from several imaging companies.

EXINI Diagnostics products were also present in the scientific program. Several clinical studies, presented as posters or in oral presentation, included our products. Two of these were:

*"Automated Quantification of Myocardial Perfusion Scintigrams: A comparison of Three Software Packages"*, M. Lomsky et al, which showed that EXINI heart was superior to the other cardiac toolboxes for the analysis of ischemia or other perfusion abnormalities.

*"Pre-treatment Bone Scan Index as an Outcome Measure Predicting for Survival in Patients with Castration-Refractory Prostate Cancer"*, L. Edenbrandt et al, which showed the prognostic value of Bone Scan Index, calculated using EXINI bone™, in patients with prostate cancer. Is this the future method for monitoring these patients?
